Editorial

Dear Reader,

There is a saying, "Rome wasn't built in a day." The adage provides a tangible example of the self-evident fact that things of significance take time and effort to establish. As someone who spends less time exercising than I should, the maxim "no pain, no gain" also springs to mind when thinking about the substantial and sustained effort required to achieve success.

With the above in mind, I extend thanks to those who have worked diligently and tirelessly to help produce this journal over the last few years. This year, the considerable effort has helped deliver another improvement in our overall Scopus ranking score.

The journal's success is based on the efforts of many. To misquote the proverb, "As iron sharpens iron, so one researcher inspires another". Our individual but combined efforts create a snowball effect. This has helped create a journal where the whole is greater than the sum of the parts.

Thanks again for the part you play in AETiC's continued success.

Professor Andrew Ware,
On behalf of the Editorial Board,
Annals of Emerging Technologies in Computing (AETiC).
