Editorial

Dear Reader,

This special issue, "Advancement in Computing and Intelligent System towards Industrial Revolution 4.0" of Annals of Emerging Technologies in Computing (AETiC), comprises 25 papers that are the latest advances in basic and applied research in the field of intelligent computing and information technology. Intelligent and smart computing research has grown to be one of the most popular area in line with the industrial revolution 4.0 that can strongly contribute to industrial applications. However, utilizing technology for solving the real-world problem remains still remains a major concern for those applications.

In this special issue, we selected the best papers from the Global Research Conference 2020 which was held virtually in 16 - 18 October 2020 which exploring the latest advances in the field of intelligent computing and information technology. It originally attracted 287 submissions with three major tracks and 21 special sessions, among which 25 regular papers were selected for inclusion in the special issue after a rigorous review process. The accepted papers illustrate the highly innovative and informative venue for essential and advanced scientific and engineering research in intelligent computing.

Special thanks to all contributing authors for their research papers and sincere support. In addition, the tremendous works by the GRaCe2020 team for their continuous effort in publishing this special issue are duly acknowledged. We also would like to express our sincere appreciation to the editorial advisory board and the selected reviewers for their invaluable comments and suggestions to ensure the quality of the research paper published in this issue.

Last but not least, this special issue will be a good platform for researchers in higher education institution and also the industries to gather the latest advanced in intelligent computing and information technology fields to disseminate their latest findings and discoveries.
